

General Water Care Instructions for Everyday Use:

PLEASE NOTE: Water quality will vary from location to location, requiring specialized treatment in your area.

- These are **GENERAL** directions that will apply to a large percentage of Spa Owners, no matter your location.
- Adding **SMALL** amounts of chemicals at a time, is the key to steering your water quality to crystal clear perfection.
- Contact Glacier Spas Online with any questions that you may have regarding your Spas filter cycles.

IMPORTANT: Ensure that all air valves are closed at the end of each day, especially during the winter season. This will maximize filtration and purification when spa is not in use and help minimize water evaporation.

WEEKLY TREATMENT

Choose a day of the week to perform the following steps. Sunday evening is recommended if possible. These steps **MUST** be followed **WEEKLY**.

1. Make sure the main Pumps are not running or someone is using the spa.
2. Remove the filters and spray off with garden hose. ||Try to get the filter restored to original colour which is white. A second set of filters is recommended for ease of use. Remove the dirty ones and replace with the clean ones. This will extend the life of the filters as well.
3. **HOT TUBS** - Add ONE Large CAP of FUSION once per week.
SWIM SPAS – Add TWO Large CAPS of FUSION once per week.

DAILY TREATMENT AFTER USE

To ensure quality water and performance for your spa please do the following after use of the spa, usually at the end of the day if the spa was used.

1. **HOT TUB OWNERS** - Add 1 LARGE CAP of SPA OXY to the water AFTER USE for every 2 people who used the spa that day.
2. For **SWIM SPA OWNERS** - Add 1 LARGE CAPS of SPA OXY to the water AFTER USE for every PERSON who used the swim spa that day.
